Abstract— Universiti Kuala Lumpur Malaysian Institute of Information Technology (UniKL MIIT) is provided with FYPCollabor8, a system facilitated on the web which has features tailored to students, supervisors, assessors, and admins. The system resolves issues of inefficient communication and submissions alongside manual tracking through automated notifications for various user types, centralized dashboards, comprehensive progress reports, and a resource hub. The system contains within it proposal management systems, submission monitoring systems, self appraisal tools all developed in PHP and MySQL along with Bootstrap following RAD's methodology. This results in smoother operations as there are less processes to face streamline burdens because there is better designed support for student.

Index Terms— *Final Year Project (FYP), Project Management System, Web-based Application, Diploma Education, UniKL MIIT, PHP, MySQL, Rapid Application Development (RAD), Student Supervision*

I. INTRODUCTION

At Universiti Kuala Lumpur Malaysian Institute of Information Technology (UniKL MIIT), the Final Year Project (FYP) is a compulsory component of most undergraduate programs, designed to bridge theoretical knowledge with practical application [1]. This research paper introduces FYPCollabor8, a diploma management system developed to enhance the FYP process at UniKL MIIT. The system is designed to facilitate the planning, execution, and documentation phases of projects in accordance with the procedures specified in UniKL's FYP Handbook 4th Edition published in 2019 [1]. The FYP for Diploma students lasts one semester while Bachelor degree student take two semesters, during which they put their knowledge into practice with guided supervision [1]. Its objectives include fostering independence, originality, and creative problem-solving within a structured timeframe, skills critical for industry readiness [1].

II. PROBLEM STATEMENT

The current management of Final Year Projects (FYP) presents several significant challenges:

A. There is no centralized platform for students to submit their FYP deliverables to supervisors and assessors

At the moment, there is no single source platform where students could keep track of their project proposals as well as their FYP submissions and presentations. Often, such submissions go through several disconnected systems, making it hard for everyone to see whether the work has been uploaded on time or not. Such decoupling causes inefficiencies and translates into missed deadlines and loss of some submissions.

B. Lecturers have difficulty assessing FYP students' deliverables across numerous platforms

FYP deliverables submitted via emails or file-sharing software need to be evaluated by supervisors and assessors as well. This, inevitably, creates fragmented evaluation processes and makes it more onerous to keep the evaluation process consistent and fair, as well as adds more non-productive work.

C. Coordinators struggle with tracking student FYP progress and handling evaluations based on group submissions

FYP progress tracking for students and supervisors is absent, as FYP coordinators do not have a centralized system. Furthermore, group assignments, evaluation marks, and project statuses are very cumbersome to manage manually and therefore, increases the chances of mistakes being made.

III. OBJECTIVES

This project's objective is to create and deploy a centralized web-based FYP Management System for Diploma students at UniKL MIIT. The specific objectives are:

- A. Provide FYP students with an intuitive interface for uploading, updating, and organising all FYP deliverables to their supervisors and accessors
- B. Lecturers can efficiently monitor progress, evaluate student work, and manage appointments
- C. Coordinator can ensuring a well-structured FYP process by tracking students submissions and monitoring the FYP evaluations submitted by lecturers

IV. LITERATURE REVIEW

A. Relevant Studies

1) Online FYP Management for IT Programs

A web-based platform consolidates communication, progress updates, and submissions for IT-related final year projects (FYPs). Centralizing project activities reduces administrative silos and enhances supervisor-student interaction [6]. These findings support FYPCollabor8's goal of streamlining workflows through centralized tools (Leung et al., 2015).

2) Prototype for Monitoring Student Performance

Interactive dashboards track FYP submissions and milestones, promoting efficient feedback loops between students and educators [7]. User-friendly design, validated through iterative testing, aligns with FYPCollabor8's focus on intuitive interfaces and automated progress monitoring (Isa et al., 2024).

3) Enhancing Educational Project Management Tools

An online system with real-time tracking and automated reminders addresses inefficiencies in traditional FYP management [22]. Transparent grading and direct communication tools enhance time management and fairness, supporting FYPCollabor8's notification and collaboration features (Elfaki & Bassfar, 2020).

4) Optimizing FYP Management with Web Technology

An integrated online system enhances FYP supervision and assessment through improved communication, progress tracking, and scalability [21]. These features reduce administrative burdens and support FYPCollabor8's potential to leverage web-based solutions for efficient project management (Halim et al., 2022).

5) Enhancing FYP Supervision with Digital Platforms

Project management principles in technology-driven environments improve educational outcomes through structured planning and evaluation [4]. These principles align tools with learning objectives, enhancing student performance and supporting FYPCollabor8's aim to streamline administrative processes while addressing resource constraints (Hassen, 2024).

6) Assessing Digital Tools for FYP Data Management

Project management principles in technology-driven environments improve educational outcomes through

structured planning and evaluation [4]. These principles align tools with learning objectives, enhancing student performance and supporting FYPCollabor8's aim to streamline administrative processes while addressing resource constraints (Hassen, 2024).

6) Assessing Digital Tools for FYP Data Management

A website-based FYP management system at Trisakti University, utilizing UML diagrams and PIECES analysis, minimizes errors and improves data integrity [23]. This approach aligns with FYPCollabor8's objective to implement robust data management through practical testing refinements (Yojana et al., 2025).

B. Case Studies of Existing Systems

Table I summarizes the advantages and disadvantages of the four systems, highlighting the gaps that FYPCollabor8 aims to address

TABLE I. COMPARISON OF EXISTING SYSTEMS

Features	Name of Applications			
	UNIMAS	FYPOS	TARUMT	FYPMS
Login, logout and registration	Yes	Yes	Yes	Yes
Create group and propose title	Yes	Yes	Yes	Yes
Change project detail	Yes	No	No	No
Manage submissions	Yes	Yes	Yes	Yes
Diary progress	Yes	No	No	Yes
Book meeting	No	No	No	No
View teaching materials	No	No	No	No
View announcement	Yes	Yes	Yes	Yes
Change student project detail	No	No	No	No
Manage meeting	No	No	No	No
Progress tracking	Yes	No	Yes	Yes
View student diary	Yes	No	No	Yes
View student submissions	Yes	Yes	Yes	Yes
View student details	Yes	Yes	Yes	Yes
Student evaluation	Yes	Yes	Yes	Yes
Manage announcement	Yes	Yes	Yes	Yes
Assign supervisor and assessor	No	No	No	No
Manage FYP project group	No	No	No	No
Manage rubrics	No	No	Yes	No
Assign assessments	Yes	Yes	Yes	Yes
Manage teaching materials	No	No	No	No
View and Download student marks	No	Yes	No	No
Manage students and lecturers	No	No	No	Yes

Features	Name of Applications			
	UNIMAS	FYPOS	TARUMT	FYPMS
Manage semester	No	No	No	No
Manage feedbacks	Yes	Yes	Yes	Yes

C. Gap Analysis

The current systems in use exhibit critical gaps where inadequate real-time alerts result in missed deadlines, interface oversimplification fails to address specific user needs, lack of self-evaluation promotes inequity, and stagnant evaluation processes hinder improvement. Moreover, haphazard monitoring support coupled with inefficient communication scaffolding stifles productivity, and scant assistance for curricular materials places students at a disadvantage. FYPCollabor8 resolves these issues through automated notifications, custom dashboards, peer assessment capabilities, visual progress tracking, unified communication tools, and a resource hub.

D. Feasibility Insights

Component heads identify the different components of your paper. Studies confirm that web-based, open-source solutions like PHP and MySQL are economically viable, leveraging existing infrastructure to minimize costs. Operationally, centralized systems reduce manual effort, while technically, the use of established technologies ensures feasibility, supported by the expertise of the development team.

V. METHODOLOGY

For the development of a web-based Final Year Project (FYP) management system for Universiti Kuala Lumpur Malaysian Institute of Information Technology (UniKL MIIT), the collaborative RAD methodology was adopted. The development process comprises four phases: Requirements Planning, User Design, Construction and Release as illustrated in Figure 1.

Fig. 1. Rapid Application Development (RAD)

A. Requirements Planning

This phase establishes the project's foundation. Requirements were gathered through consultations with students, lecturers, and coordinators, defining system scope, objectives, and core functionalities like secure authentication, project management, progress tracking, and role-specific dashboards. Iterative feedback cycles refined requirements to support system design.

B. User Design

In this phase, primary workflows were visualized through prototypes for system components. Usability testing with

students, supervisors, assessors, and coordinators shaped intuitive interfaces, ensuring responsiveness across devices like mobile phones, desktops, and tablets. Feedback streamlined complex user needs within flexible design frameworks.

C. Construction

This phase focused on coding and refining the system. A multi-layered architecture was implemented, using MySQL for data storage and PHP for core functions like user logins and project evaluations. Phased testing identified and resolved issues during stress cycles, ensuring smooth functionality and automated task management for an optimized user experience.

D. Release

The final phase involved deploying FYPCollabor8 for real-world use at UniKL MIIT, making it accessible to all stakeholders. System performance was monitored post-launch, and feedback was collected to address any issues. Plans for future updates and enhancements were outlined to ensure the system remains sustainable and adaptable to emerging user needs.

VI. SYSTEM ARCHITECTURE

The FYPCollabor8 platform was developed using PHP for backend functionality and MySQL for database management to handle user accounts, project submissions, and evaluation records. The frontend leverages HTML5 and CSS3 with the Bootstrap 5 framework to create a responsive, mobile-first interface that adapts seamlessly across devices, from smartphones to desktop workstations. JavaScript enhances user interactions with real-time updates, such as dynamic dashboard refreshes and form validations, delivering a smooth single-page application experience. Figure 2 shows the FYPCollabor8 system architecture.

Fig. 2. FYPCollabor8 System Architecture

A. User Interface Layer

FYPCollabor8 offers responsive web interfaces for students, supervisors, assessors, coordinators, and admins, built with Bootstrap 5. Students interact with features like proposal submission and progress diaries, while supervisors and assessors manage evaluations and meetings via dedicated dashboards. Coordinators oversee system administration (e.g., assigning groups, managing rubrics), and admins handle user records. JavaScript enables dynamic updates, such as real-time notification displays, without page reloads. The design adheres

to responsive and accessibility standards, ensuring usability across desktops, tablets, and smartphones.

B. Application Logic Layer

The PHP backend manages core functionalities, including user authentication, proposal approvals, deliverable evaluations, and admin-driven user management (e.g., adding/removing students or lecturers). It follows a modular architecture for maintainability, with prepared statements ensuring database security. Business logic enforces rules like duplicate group prevention and submission validation, while APIs are designed for future scalability. Error handling and input validation are implemented throughout transaction processes, with the backend hosted on the XAMPP server environment for development and testing.

C. Data Management Layer

MySQL, integrated with XAMPP, stores all platform data in tables such as students, lecturers, admins, coordinators, users, deliverables, diary, meetings, and evaluations, reflecting the Entity-Relationship Diagram (ERD) from the methodology. This relational design supports efficient storage of user profiles, project details, submission records, and evaluation scores. Indexing optimizes queries for progress tracking, while regular backups and hashed passwords protect data integrity. The database accommodates up to 300 users and supports future module expansions.

D. Performance and Scalability

Server-side caching on XAMPP enhances response times for frequent operations like submission uploads. The stateless design allows horizontal scaling during peak usage periods, such as semester deadlines. Asynchronous processing handles intensive tasks, such as evaluation calculations, ensuring smooth performance as the user base grows.

VII. PROTOTYPE

This section details the development of FYPCollabor8, a web-based Final Year Project (FYP) management system designed for Universiti Kuala Lumpur Malaysian Institute of Information Technology (UniKL MIIT). The prototype fulfills its core objectives of enhancing FYP coordination, submission tracking, and evaluation among students, supervisors, assessors, coordinators, and admins, transforming traditional FYP management into an efficient digital platform. Figure 3 shows the Landing Page of the website.

Fig. 3. Landing Page

A. Student Features

The student features of FYPCollabor8 are designed to provide an intuitive and efficient experience, enabling students to manage their FYP activities seamlessly.

Fig. 4. Login Page

Fig. 5. Register Page

Figure 4 illustrates the login page, allowing students to input their student ID and password, with a successful login redirecting them to their dashboard. Figure 5 displays the student registration page, where new users can securely enter their student ID, password, full name, email, and password.

Fig. 6. Dashboard Page

Fig. 7. Project Overview Page

Fig. 8. Deliverable Page

Fig. 9. Diary Progress Page

Fig. 10. Teaching Materials Page

Fig. 11. Meeting Schedule Page

Fig. 12. Profile Page

Figure 6 to 12 show the various interfaces available to students on the FYPCollabor8 platform. Figure 6 illustrates the interface where students, upon logging in, are directed to a personalized dashboard displaying project details, proposal status, announcement, teaching materials, and meeting schedule. Figure 7 shows the title proposal interface, where students view group details, propose titles, and select supervisors, with

restrictions on duplicate group creation. It also displays the change project details, enabling students to edit titles and descriptions after supervisor approval. Figure 8 illustrates the deliverables management page, where students can upload, update, or delete submissions like reports and presentations with status notifications. Figure 9 presents the diary progress page, allowing students to log weekly activities once group approval is granted. Figure 10 shows the teaching materials page, listing coordinator-uploaded resources for student reference. Figure 11 displays the meeting scheduling page, where students request meetings and view a calendar of upcoming sessions, editable post-approval. Figure 12 illustrates the profile page, where students can view and update personal details and passwords securely.

B. Supervisor Features

The supervisor features enable effective oversight and evaluation of student FYP progress.

Fig. 13. Login Page

Fig. 14. Register Page

Fig. 16. Title Proposal Page

Fig. 17. View Student Submission Page

Fig. 18. Manage Meetings Page

Fig. 19. View Student Diary Page

Fig. 20. Evaluate Student and Group Page

Fig. 21. View Student Details Page

Fig. 22. Profile Page

Figure 13 to 22 show the various interfaces available to supervisors on the FYPCollabor8 platform. Figure 13 displays the supervisor registration page, where new users can securely enter their lecturer ID, password, name, email, and contact number to create an account. Figure 14 illustrates the login page, allowing supervisors to input their ID and password, with a successful login redirecting them to their dashboard. Figure 15 presents the supervisor dashboard, offering a centralized view of student lists, meetings, evaluations, and title proposals with quick statistics. Figure 16 shows the title proposal review page, where supervisors manage pending requests and provide feedback. Figure 17 displays the view student submission page, enabling filtering by semester or student to track deliverables. Figure 18 illustrates the manage meetings page, listing scheduled meetings in a calendar and table format. Figure 19 presents the view student diary page, allowing supervisors to filter and monitor student entries. Figure 20 shows the evaluate students and group page, where supervisors assess individual and group performance. Figure 21 displays the view student details page, listing supervised students with filtering options. Figure 22 illustrates the profile page, where supervisors can view and update personal details and passwords securely.

C. Assessor Features

The assessor features focus on evaluating student and group submissions efficiently.

Fig. 23. Dashboard Page

Fig. 24. View Student Detail Page

Fig. 25. View Student Submission Page

Fig. 26. Evaluate Student and Group Page

Figure 23 to 26 show the various interfaces available to assessors on the FYPCollabor8 platform. Figure 23 displays the dashboard page, where assessors gain an overview of their assigned evaluation tasks, showing assigned students, evaluation completion percentages, and available announcements with a clear indication if no students are assigned. Figure 24 illustrates the view student detail page, allowing assessors to view basic information about assigned students, including names, emails, usernames, IC numbers, phone numbers, intake details, group names, and marks with filtering options by semester, name, or deliverable. Figure 25 presents the view student submission page, where assessors can monitor project deliverables, listing group names, student names, component titles, submission types, dates, and statuses with filtering options and a notification if no components are

available. Figure 26 shows the evaluate student and group page, where assessors can assess student or group project work, requiring selection of a group or individual student to view evaluation details and submit assessments with a prompt if no group is selected.

D. Coordinator Features

The coordinator features provide comprehensive administration and oversight of the FYP process.

Fig. 36. Assign Group Page

Fig. 37. View Student Mark Page

Figure 27 to 37 show the various interfaces available to coordinators on the FYPCollabor8 platform. Figure 27 displays the dashboard page, where coordinators gain a centralized view of FYP activities with statistics and access to management

modules. Figure 28 illustrates the assign supervisors & assessors page, where coordinators manage assignments for student groups. Figure 29 presents the manage students page, where coordinators oversee student data with options to add or edit. Figure 30 shows the manage lecturers page, enabling management of lecturer records. Figure 31 displays the view student submission page, where coordinators monitor deliverables with filtering options. Figure 32 presents the view student detail page, providing a detailed student overview. Figure 33 shows the manage rubrics page, where coordinators create evaluation criteria. Figure 34 illustrates the assign assessment page, where coordinators set deliverables for evaluation. Figure 35 presents the manage semester page, allowing semester cycle management. Figure 36 displays the assign group page, where coordinators create and manage student groups. Figure 37 shows the view student mark page, displaying performance data with filtering.

E. Admin Features

The admin features offer centralized management of user and system operations.

Fig. 38. Dashboard Page

Fig. 39. Manage Students Page

Fig. 40. Manage Lecturers Page

Fig. 41. View Student Details Page

Figure 38 to 41 show the various interfaces available to admins on the FYPCollabor8 platform. Figure 38 displays the dashboard page, where admins gain a centralized view of FYP activities, showing statistics such as the total number of lecturers and students. Figure 39 illustrates the manage students page, where admins can oversee all registered students, displaying names, usernames, emails, intake years, and intake months with options to add, edit, delete, or bulk upload student details using a CSV file. Figure 40 presents the manage lecturers page, where admins can oversee lecturer records, including supervisors, assessors, and coordinators, listing names, usernames, emails, and assigned roles with options to add, edit, assign roles, delete, or bulk upload lecturer details using a CSV file. Figure 41 shows the view student details page, where admins can access a detailed overview of students involved in the FYP, listing group names, student names, semesters, assigned supervisors, assessors, and total marks achieved with filtering options by semester, group, or student name.

VIII. CONCLUSION AND RECOMMENDATIONS

A. Recommendation

To enhance FYPCollabor8, the user interface should be redesigned with modern aesthetics to improve visual appeal. Introducing a peer evaluation feature will promote accountability in group assignments, enabling review by supervisors and coordinators. Real-time notifications for deadlines and status updates will strengthen communication for all stakeholders. Providing previewed rubrics will ensure student submissions align with evaluation criteria, reducing discrepancies. A late submission handling module should apply systematic penalties or extensions to maintain fairness. Integrating plagiarism scanning for submissions will uphold academic integrity. Comprehensive ethnographic testing across UniKL MIIT's diverse user base will further improve usability and effectiveness.

B. Conclusion

FYPCollabor8 effectively streamlines final year project (FYP) management at UniKL MIIT by providing a centralized platform for student submissions, supervisor oversight, assessor evaluations, and coordinator administration. Developed with HTML, CSS, JavaScript, PHP, and MySQL, the system offers responsive design and practical features to optimize educational workflows. While minor design improvements and additional features are needed, FYPCollabor8 establishes a robust foundation for scalable academic management, supporting continuous advancements in technology-driven educational solutions.
